PROFESSIONAL SUMMARY

Flutter Developer with around 4 years of experience in building high-performance cross-platform apps using Flutter, Dart, and Firebase. Skilled in API integration, state management, payment gateways, offline storage, and real-time databases.

Contributed to multiple production apps, ensuring scalability, performance, and optimized UI/UX. Proficient in MVVM architecture and third-party integrations for efficient development. Passionate about clean code, maintainability, and adopting the latest Flutter trends.

TECHNICAL SKILLS

- ✓ **Programming Languages:** Flutter, Dart
- ✓ **Mobile Development:** Cross-platform app development (Android & iOS)
- ✓ **State Management:** Provider, GetX, Flutter-BLoC
- ✓ **Backend & Cloud Services:** Firebase (Firestore, Authentication, Cloud Functions), REST APIs (HTTP, Dio)
- ✓ **Database Management:** SQLite, Firebase Realtime Database , Shared Preferences
- ✓ **App Architecture:** MVVM Architecture for scalable and maintainable code
- ✓ **Version Control:** Git, GitHub, Postman
- ✓ **Maps & Payment Integration:** Google Maps, Geolocation, Razorpay

WORK EXPERIENCE

Software Engineer , RedBlackTree

Nov 2024 - Apr 2025

Methodical App

A modern enterprise workflow and automation platform offering an all-in-one software solution to streamline business processes

- Developed cross-platform mobile apps for Android and iOS using Flutter and integrated WebView for smooth web content loading.
- Integrated RESTful APIs to retrieve real-time data from backend services and implemented local data caching using SQLite (sqflite) for offline accessibility.
- Designed and implemented a project creation module with robust form validation and state management using the Provider package.
- Improved application performance by optimizing UI rendering, reducing load times, and ensuring a seamless user experience across devices.

Technologies Used:

Flutter, Dart, REST API (Dio), State Management (Provider), Offline Storage (SQFlite), Third-Party Libraries

DockHUBB APP (dockmaster)

DockHUBB is a dockmaster app designed to manage marine units, offering real-time pedestal information and enabling efficient control of docking operations within the marina environment

- Developed user-friendly UI for managing marine units and docking operations.
- Implemented Provider for efficient state management and smooth app performance.
- Integrated REST APIs to retrieve and control real-time pedestal data.
- Utilized Firebase Analytics and Firebase Messaging for tracking user behavior and handling notifications.
- Incorporated third-party libraries to enhance app capabilities.
- Designed interactive charts to visualize available marine resources clearly

CaptHUBB APP

CaptHUBB is a captain's app that provides real-time marine details, assists in precise docking, and tracks boat resource usage like water and power.

- Developed a responsive UI for real-time marine details and docking assistance.
- Implemented state management for smooth app performance.
- Integrated REST APIs to fetch and display live marine data.
- Integrated third-party libraries to enhance app functionality.
- Implemented QR code scanning for booking pedestals and commissioning boats

Technologies Used:

Flutter, Dart, REST API (Dio), State Management (Provider), Firebase (Analytics, Messaging), Barcode Scanner, Third-Party Libraries

HUBBELL CODE SCANNER

Hubbell Code Scanner is a mobile app that scans 2D/3D barcodes and QR codes on Hubbell products to decode and display detailed component information used in fuel gas piping systems.

- Developed cross-platform UI for Android and iOS using Flutter to ensure consistent user experience.
- Implemented state management using Provider for efficient app state handling.
- Integrated ZXing library for barcode and QR code scanning functionality.
- Enabled QR code generation based on user-selected inputs from dropdown menus.
- Utilized third-party libraries to enhance overall app performance and reliability.
- Implemented offline storage of scanned/generated data using SQFlite package.

Technologies Used:

Flutter, Dart, State Management (Provider), ZXing, Offline Storage (SQFlite), Third-Party Libraries

STERNA SELYEK

A secure lock access system that enables users to unlock seamlessly in offline mode, ensuring reliable and convenient operation.

- Developed a seamless and user-friendly UI for app screens.
- Implemented efficient state management to ensure smooth app functionality.
- Integrated web-based link navigation for enhanced accessibility.
- Connected the app with backend APIs for secure data exchange.
- Enabled real-time location tracking for offline lock access.
- Utilized third-party solutions to optimize performance and extend features.

Technologies Used:

Flutter, Dart, State Management (Flutter BLoC), URL Launcher, REST API (HTTP), Geolocation, Third-Party Libraries

https://play.google.com/store/apps/details?id=com.sterna.s4r_saas

<https://apps.apple.com/us/app/sterna-selyek/id6504219739>

Sterna Unigem Dealer

An app for unlocking electromagnetic locks on tanker trucks using OTP authentication. Dealers authenticate via mobile number or customer code and communicate with BLE keys for secure access.

- Developed authentication flow and various UI screens for seamless user experience.
- Integrated APIs for authentication, truck details, and operational features.
- Implemented state management for efficient app performance.
- Incorporated third-party libraries to enhance app functionality.
- Enabled real-time location tracking for improved operational insights.
- Implemented OTP-based authentication for secure access control.

Technologies Used:

Flutter, Dart, State Management (Flutter BLoC), URL Launcher, REST API (HTTP), Geolocation, Third-Party Libraries
