SUMMARY

Passionate Android Developer with 1 year of experience in designing, building, and maintaining internal Android applications using Kotlin. Strong experience in barcode-based systems, scanning and printing workflows, dynamic UI components, REST API integration, Room database usage, debugging, and improving application stability and performance across multiple real-time projects.

TECHNICAL SKILLS

Programming Languages: Kotlin, Java, SQL (SQLite / Room), XML (Android UI)

Development Tool: Android SDK, Jetpack Components(ViewModel,LiveData,Navigation), MVVM Architecture,Material Design Components, Retrofit (REST API),OkHttp (Networking)

Libraries & Tools: Android Studio, Git (Version Control), Github, Barcode / QR Libraries /ZXing

PROJECTS

Barcode Application

Barcode-Based Label Design and Printing Application

- Built a barcode-based Android application with dynamic UI elements including editable text, lines, shapes, borders, date, and time components
- Integrated barcode, QR code, and data matrix generation features
- Added Excel import and local data persistence using Room database
- Delivered image and PDF upload functionality to support document workflows
- Implemented Wi-Fi and Bluetooth printing functionality to support multiple printing environments

Nexteer Dispatch

Internal Product Dispatch and Scanning Android Application

- Built product listing screens using RecyclerView to clearly display dispatch items
- Developed barcode scanning functionality to fetch product details accurately during dispatch operations
- Implemented printing screens to generate dispatch documents and labels for internal use
- Integrated REST APIs to retrieve product and order details and applied input validations to prevent incorrect or duplicate entries.
- Optimized API response handling and UI updates to ensure smoother screen transitions

EXPERIENCE

Android Developer – Codentrix Technologies Private Limited

Chennai

End-to-End Automation and Technology Solution Provider

November - 2024 - Present

- Contributed to the development and maintenance of 7 internal Android applications using Kotlin and delivered product listing, editing, scanning, and printing modules aligned with business workflows
- Engineered advanced features such as undo/redo, save/refetch logic, and local data persistence using Room database
- Wi-Fi and Bluetooth printing functionality to support multiple printing environments
- Resolved application crashes and optimized performance through systematic debugging and comprehensive testing

EDUCATION

B. S. Abdur Rahman Crescent Institute Of Science And Technology
Computer Science and Engineering

Chennai
2021 – 2024
